Experience:

Software Engineer

General Motors — *March 2022 – Present*

- Rewrote and migrated legacy .NET Framework services to Java Spring Boot, modernizing backend architecture and improving maintainability and long-term support.
- Took increasing ownership responsibilities of a production backend application, contributing to deployments, incident response, and ongoing system reliability.
- Migrated legacy authentication services to OAuth 2.0, strengthening security and eliminating certificate-based authentication across team applications.
- Designed and implemented REST API endpoints serving part lists with secure S3 download links for external systems.
- Built backend services to process data from newly onboarded manufacturing plants, improving tracking accuracy for soft part information.
- Investigated and resolved production incidents through root cause analysis, improving system stability.
- Designed and maintained CI/CD pipelines using Azure DevOps, GitHub Actions, and YAML.
- Developed JMeter performance tests and Dockerized environments to benchmark services and identify scalability limits.
- Led migrations of critical applications to supported server versions, reducing security risks.
- Optimized SQL stored procedures and queries to improve backend reliability and data accuracy.
- Built Java-based automation frameworks using Selenium to validate backend APIs and frontend workflows, improving regression coverage and release confidence.

Education:

St. John's University, Queens, New York - May 2021

Bachelor of Science: Computer Science - Cyber Security

Certifications:

- AWS Fundamentals Specialization – Coursera (Completed Sept 2025)

Technical Skills:

- **Languages:** Java, C#, Python, SQL, TypeScript, HTML/CSS
- **Frameworks/Libraries:** .NET, Selenium, Spring Boot, React, Flask, Pandas, BeautifulSoup, Hugging Face Transformers
- **CI/CD & DevOps:** Azure DevOps, GitHub Actions, Docker, PowerShell, AWS (EC2, S3, IAM, RDS, Lambda), YAML
- **Testing:** JMeter, UI & API Automation, Manual & Automated QA
- **Databases:** Oracle, MS SQL Server, PostgreSQL
- **Tools:** Visual Studio, VS Code, Eclipse, IntelliJ, Git
- **Methodologies:** Agile, SAFe

Personal Projects:

AI Resume Screening System — Python, FastAPI, Transformer Models

- Built an AI-powered resume screening system using transformer-based embeddings to compute semantic job–candidate match scores.
- Designed a FastAPI backend to score resumes against job descriptions and return structured match explanations.
- Implemented rule-based NLP pipelines to extract, compare, and explain matched and missing skills for transparency and interpretability.

Food Diary Application – *Spring Boot, Java, PostgreSQL, React, Tailwind CSS, REST APIs*

- Built a full-stack app for tracking meals and calories with date-based filtering.
- Designed RESTful APIs with validation and timestamp handling; integrated PostgreSQL with schema design and queries.
- Developed responsive React UI with Tailwind CSS, including loading states and clean styling.

AI Chatbot Web App – *Next.js, Flask, Hugging Face Transformers, Tailwind CSS*

- Built a chatbot interface with open-source language models and prompt tuning.
- Designed Flask API for model integration and error handling; frontend supports conversation history and clean styling.

NBA Player Stats Web Scraper – *Python, Flask, Next.js, TypeScript, Tailwind CSS, Pandas, Render, Vercel*

- Scraped and cleaned real-time NBA player data, exposed via Flask API with CORS support.
- Built Next.js frontend with search filters, responsive design, and loading states.
- Hosted backend on Render and frontend on Vercel; fully mobile-friendly.
