

Luther Bell

Software Engineer | Austin, TX

luthbell4@gmail.com | [LinkedIn](#) | [Portfolio Website](#)

Experience:

Software Engineer

General Motors — *October 2023 – Present*

- Led the upgrade of multiple Windows Servers from 2012 to 2022.
- Reduced application installation time by 90% through automation using PowerShell scripts and YAML.
- Resolved high-severity production issues resulting in a 40% reduction in recurring incidents.
- Built scalable CI/CD pipelines using YAML, Azure DevOps, and GitHub Actions, accelerating deployment cycles by 3x and enabling seamless rollbacks.
- Developed JMeter performance testing scripts, improving response times by 25%.
- Used Docker to containerize JMeter test environments, automating performance testing and improving testing consistency
- Designed and implemented new features under tight deadlines to meet urgent business needs
- Actively collaborated in Agile/Scrum projects, providing technical insights during sprint planning and retrospectives

Software Test Engineer

General Motors — *March 2022 – October 2023*

- **Automated 300+ test cases using Java**, enhancing test coverage and **reducing regression effort by 2 weeks**.
- Designed and executed manual test plans ensuring software reliability in early development.
- Worked with developers and product owners to define acceptance criteria and verify bug fixes.
- Integrated automated tests into CI/CD pipelines, ensuring deployment quality.

Education:

St. John's University - Queens, New York (May 2021)

Bachelor of Science - Computer Science

Skills:

- **Languages:** Java, C#, Python, SQL, TypeScript, HTML/CSS
- **Frameworks/Libraries:** .NET, Selenium, Spring Boot, React
- **CI/CD & DevOps:** Azure DevOps, GitHub Actions, YAML, Docker, PowerShell
- **Testing:** JMeter, UI & API Automation, Manual & Automated QA
- **Databases:** Oracle, MS SQL Server, PostgreSQL
- **Tools:** Visual Studio, VS Code, Eclipse, IntelliJ, Git
- **Methodologies:** Agile, SAFe

Personal Projects:

NBA 2K Animation Database - In Progress

Tech Stack: React, TypeScript, Tailwind CSS, Spring Boot, Java, PostgreSQL, REST APIs, Docker (planned), Git

- Built a full-stack web application that lets NBA 2K players search and filter the best MyCareer animations (jump shots, dribble moves, dunk packages) based on build attributes like height, position, 3PT rating, and ball handle.
- Designed and developed RESTful APIs in Spring Boot to serve filtered animation data and support future user-generated content.
- Created a modern, responsive frontend using React and Tailwind CSS, with smooth filtering UI and plans for community features like voting and comments.

NBA Player Stats Web Scraper

Tech Stack: Python, Flask, Next.js, TypeScript, Tailwind CSS, Pandas, Render, Vercel

- Built a full-stack web app to scrape and display real-time NBA player stats using Python, BeautifulSoup, and Pandas.
- Designed a Flask API to serve structured JSON data, deployed on Render with full CORS support.
- Developed a responsive frontend with Next.js and Tailwind CSS, including search functionality to filter player results.
- Implemented Axios-based API integration with robust error handling and clean data presentation.

- Deployed frontend on Vercel and configured cross-origin communication between services.
- Optimized for mobile devices and added dynamic UI elements for seamless user interaction.

AI Chatbot Web App

Tech Stack: Next.js, Flask, Hugging Face Transformers, Tailwind CSS.

- Built a responsive React frontend with chat history, message bubbles, and loading states using Tailwind CSS and Next.js
- Designed and deployed a Flask backend API to process user input and return model-generated replies using Hugging Face transformers
- Implemented prompt engineering and post-processing to improve response quality and reduce repetition
- Deployed frontend with Vercel and backend with Render, including .env configuration and RESTful routing
- Emphasized clean UI/UX and maintainable code architecture; integrated .gitignore, logging, and environment separation
